

Project title: Import Data Using Transform Maps

Phase 6: Project Testing Phase

1. Testing Framework Overview & Purpose

To confirm that our automated import pipeline works reliably under real-world conditions, we put it through three rigorous data-loading test cases. These tests evaluated both initial bulk uploads and subsequent data updates to ensure our duplication-prevention rules work as expected.

2. Execution Log & Test Cases Matrix

Test Case 1: Initial Baseline Ingestion Verification

- Objective: Verify that clean raw rows are ingested into an empty table without data loss.
- Input Parameters: Base spreadsheet file with initial test rows.
- Testing Action: Triggered the base execution transformation map.
- Observed System Result: The import set successfully processed the file rows, creating exact matching entries in the target database.
- Status: PASS

Test Case 2: Data Governance Coalesce Verification (Upsert Test)

- Objective: Ensure the system correctly identifies duplicate IDs, updating existing records and inserting new profiles simultaneously.
- Testing Prerequisite: Navigated to the Field Maps related list, chose the Employee ID configuration row, changed the Coalesce parameter to True, and saved the form.
- Input Parameters: A modified delta sheet containing 6 rows: 1 matching existing system IDs, plus 5 completely brand new employee IDs.
- Testing Action: Loaded the data file through the engine and executed the transformation map.

- Observed System Result: The system checked the existing data and correctly split the changes: 1 rows were updated and 5 new rows were inserted. No duplicate profiles were created.

- Status: PASS

Test Case 3: Complete Redundant Sheet Re-upload Test

- Objective: Confirm that uploading the exact same sheet again doesn't create duplicate records or perform unnecessary database updates.

- Input Parameters: The exact same delta spreadsheet used in Test Case 2.

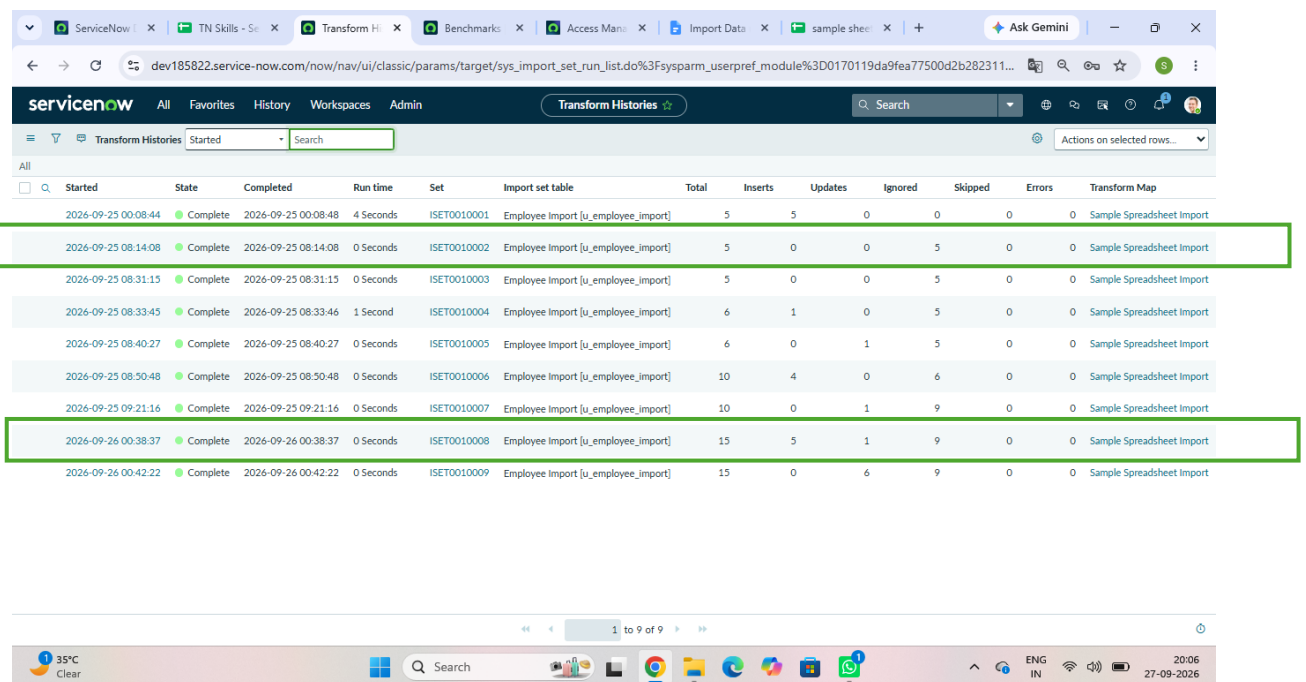

- Testing Action: Submitted the identical file and ran the transformation tool again.

- Observed System Result: The system matched all 5 records against the database and saw that no information had changed. As a result, it marked all 5 rows as Ignored.

- Status: PASS

3. Data Testing Logs Screenshots Verification

Below are the execution history charts showing our test results:

Started	State	Completed	Run time	Set	Import set table	Total	Inserts	Updates	Ignored	Skipped	Errors	Transform Map
