

# Project title: Import Data Using Transform Maps

## Phase 8: Project Demonstration Phase

### 1. Detailed System Analytics Reports Breakdown

Three specialized reporting charts were configured using the Reports -> Create New system layout utility to track our data visually:

#### Report 1: Employees Distribution by Department

- Data Selection Structure: Source Type = Table | Target Schema Table = Employee Test
- Visual Chart Model Type: Pie Chart
- Configuration Parameters: Group By field set to Department | Aggregation mode set to Count.
- Execution Status: Configured, run, and successfully saved.

#### Report 2: Employees Distribution by Location

- Data Selection Structure: Source Type = Table | Target Schema Table = Employee Test
- Visual Chart Model Type: Bar Chart
- Configuration Parameters: Group By field set to Location | Aggregation mode set to Count.
- Execution Status: Configured, run, and successfully saved.

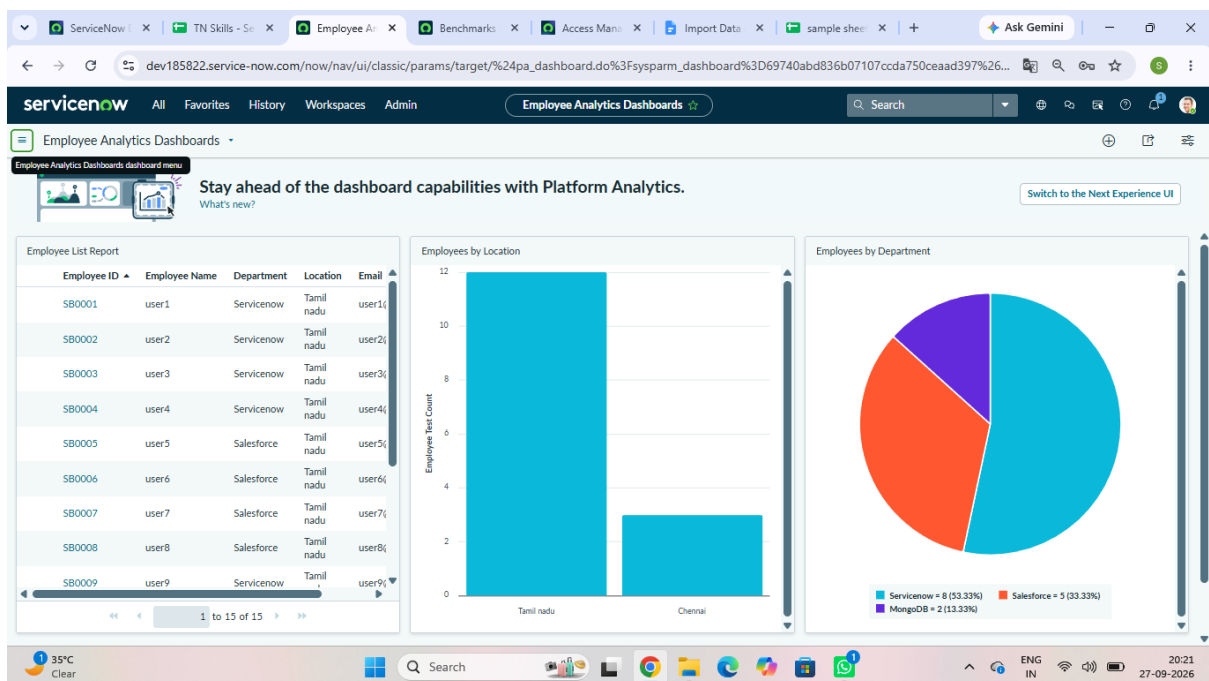

#### Report 3: Integrated Employee Grid Inventory List

- Data Selection Structure: Source Type = Table | Target Schema Table = Employee Test
- Visual Chart Model Type: Interactive List View Data Grid
- Configuration Parameters: Selected columns ordered as: Employee ID, Employee Name, Email, Department, and Location.
- Execution Status: Configured, run, and successfully saved.

## 2. Centralized Employee Analytics Executive Dashboard Workspace

To provide single-screen visibility for stakeholders, a master dashboard named Employee Analytics Dashboard was created via the PA\_DASHBOARDS.FORM configuration window.

Using the Share -> Add to Dashboards option inside each report, all three widgets were embedded into a unified workspace. This gives HR teams an easy, visual way to monitor data trends, tracking department and location distributions from one centralized view.
